

LENNOX_E

Superior quality, high tolerance against rust diseases, flexible time of sowing

Advantages:

- High yield combined with premium baking quality
- Good lodging resistance, healthy leaves
- Optimum yield potential after late autumn sowing

Cultivation:

Premium wheat production after late harvest crops. Wide sowing time from middle of October to April.

Short profile:

---- = very low resistance/early/short,

++++ = very high resistance/late/long

Plant Development

Vitality

Winter hardiness medium

Drought resistance high

Plant Health

Quality

LENNOX E

Superior quality, high tolerance against rust diseases, flexible time of sowing

Plant development and vitality:

Ear emergence	
Maturity	
Winter hardiness	medium
Drought resistance	high

Yield structure:

Yield structure	Ear density type
Ears/m ²	
Grains/ear	
TGW	

Sowing:

Time of sowing	15th of October till end of March
Seed rate	locally adapted

Straw:

Plant height	short
Lodging resistance	
Plant growth regulator	slightly lower

Disease resistance:

Mildew	
Septoria leaf blotch	
Yellow rust	
Brown rust	
DTR	
Fusarium	

LENNOX E

Superior quality, high tolerance against rust diseases, flexible time of sowing

Quality:

Hagberg / Falling number	
Hagberg stability	High
Zeleny / Sedimentation value	
Protein content	
Water absorption	
Flour extraction	
Loaf volume
