

DUKATO

Low cost population rye

Advantages:

- Medium tall population-rye-variety with very high yield potential
- Very good resistance against mildew, brown rust and rhynchosporium
- Safe commercial quality

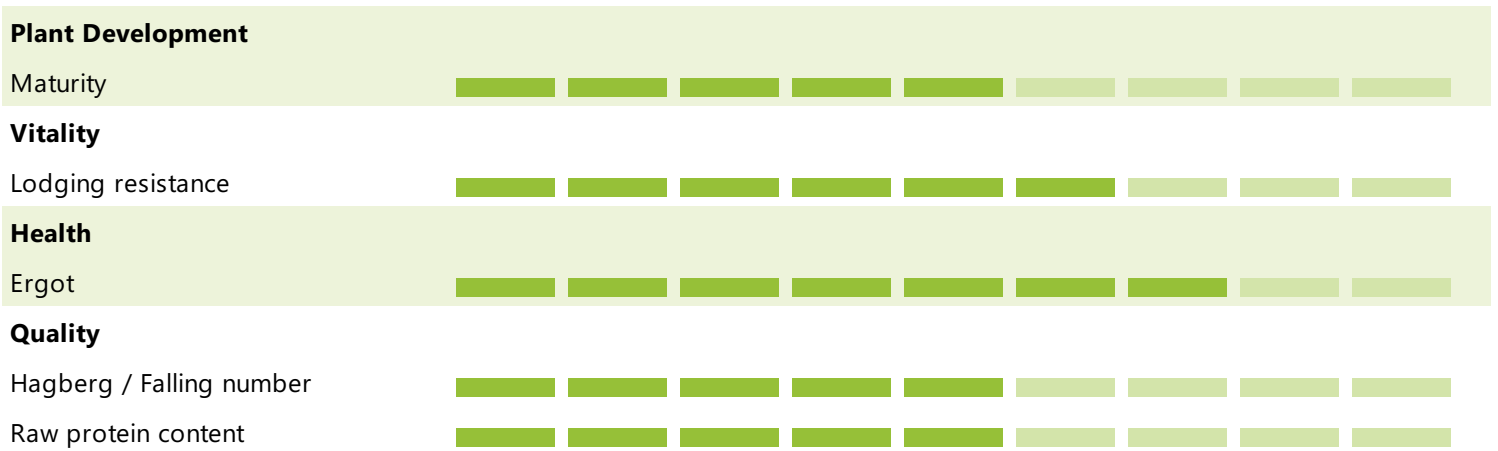

Cultivation:

For extensive and intensive cultivation on light and dry rye regions.

Short profile:

---- = very low resistance/early/short,

++++ = very high resistance/late/long

DUKATO

Low cost population rye

Plant development and vitality:

Ear emergence	
Maturity	

Yield structure:

Ears/m ²	
Grains/ear	
TGW	

Sowing:

Time of sowing - poor soils	Dry and poor soils: 15th of September until end of October, better soils: 20th of September until beginning of November
Seed rate	locally adapted

Straw:

Plant height	medium to tall
Lodging resistance	
Plant growth regulator	locally adapted

Disease resistance:

Mildew	
Rhynchosporium	
Brown rust	
Ergot	

Fungicides for intensive cultivation:

Standard disease pressure	Standard disease pressure combination product in EC 39 - 49
High disease pressure	Treatment splitting in EC 32 and EC 49

Quality:

Hagberg / Falling number	
Raw protein content
